DETAILED ACTION

1. The following action is taken in view of the amendment filed 6/10/05.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 3. Claims 1, 5, 8-12, 14 and 16 are rejected under 35 U.S.C. 102(e) as being anticipated by Chainer et al. (US006603627B1).

Re claim 1: Chainer et al. teaches a method that includes positioning a data surface adjacent a head (achieved by structure in figure 1) and determines a track range based on several lateral positions while urging the actuator against a stop (operation of figure 3).

Re claim 5: Satisfied by Chainer et al. since stop limits travel of head and therefore the extent of reading of the tracks.

Re claim 8: The claimed another surface's track range is deemed satisfied when a second disk is used with the method taught by Chainer et al.

Re claim 9: See figure 3.

Re claim 10: Chainer et al. teaches a method of urging an actuator against a stop while identifying several tracks (figure 3).

Art Unit: 2651

Re claim 11: Clearly the arrangement of Chainer et al. can't read beyond the range head is allowed to travel due to the stop.

Re claim 12: The most extreme track is satisfied due to head travel limited by the stop.

Re claim 14: The range limitation is satisfied due to head travel limited by the stop.

Re claim 16: See structure of figure 1.

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 6. Claims 6 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chainer et al. in view of Lee

The teaching of Chainer et al. is discussed above and incorporated herein. Claim 6 additionally sets forth a guard band which although not taught by Chainer et al. is taught

Art Unit: 2651

by Lee. (for example figure 3) to insure placement of data within a given range. It would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate the teaching of Settje et al. in the arrangement of Chainer et al. to insure placements of data within a given range. The use of guard bands as set forth in claim 17 is satisfied by Lee (figure 3) and would have been obvious to incorporate in Chainer et al. for reasons given with respect to claim 6, above.

Allowable Subject Matter

- 7. Claims 19-22 are allowed for reasons of record.
- 8. Claims 2/1, 3/1, 4/1, 7/1 13/10, 15/10 and 18/10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. Claims 2/1, 3/1, 4/1, 13/10, 15/10 and 18/10 are directed to allowable subject matter for reasons of record. The claimed method as setr forth in claim 7/1 that includes designating a track range based on the several lateral positions and on a predetermined design margin derived from mechanical tolerances and which is wider than one track as set forth is neither taught by nor an obvious variation of the art of record.

Response to Arguments

9. Applicant's arguments filed 6/10/05 have been fully considered but they are not persuasive. Applicant argues with respect to Chainer et al. is concerned with self servo writing and dos not disclose determining a track range as set forth in claim 1 or identifying each of several tracks at a common actuator position. While Examiner

Art Unit: 2651

agrees that Chainer et al. is directed to self servo writing, the measuring and determination steps (330 and 340) do determine a track range (spacing between tracks) by the identification of several tracks, adjacent tracks, satisfies the broad limitations of track range and identification of tracks as presently set forth.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Andrew L. Sniezek whose telephone number is 571-272-7563. The examiner can normally be reached on Mon.-Fri...

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Hudspeth can be reached on 571-272-7843. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
